

Executive Summary

CoreTech Innovation - VAPT Assessment

Date: June 27, 2026 **Prepared By:** Cyber Security Assessment Team **Classification:** CONFIDENTIAL

Overview

CoreTech Innovation ke network infrastructure par 14-day Vulnerability Assessment aur Penetration Testing (VAPT) conduct kiya gaya hai. Testing PTES (Penetration Testing Execution Standard) framework ke according kiya gaya.

Key Findings

Metric	Value
Total Hosts Scanned	256
Active Hosts	6
Total Vulnerabilities	26
Critical	3
High	5
Medium	8
Low	4

Critical Issues

- BlueKeep (CVE-2019-0708)** - Domain Controller par remote code execution possible hai. Isse attacker pura domain compromise kar sakta hai.
- MySQL Empty Password** - Database server par root password set nahi hai. Sensitive data exposed hai.
- SMBGhost (CVE-2020-0796)** - SMB vulnerability se wormable attack possible hai.

Business Impact

- Domain Controller Compromised** - Full administrative access
- 2,847 User Accounts** - Credentials exposed
- Payment Database** - Accessible without authentication
- Estimated Downtime:** 72+ hours if exploited
- Estimated Cost:** \$500,000+

Immediate Actions Required

- BlueKeep patch install karo (KB4499175)
- MySQL root password set karo
- SMBGhost patch karo (KB4551762)
- Network segmentation implement karo
- MFA enable karo

Conclusion

CoreTech Innovation ka network significantly vulnerable hai. 3 critical vulnerabilities immediate attention require karte hain. Agar inhe fix nahi kiya gaya toh complete network compromise ho sakta hai.
